

Web Page Analysis

ECC006 — Homework Assignment #9 | Taha Saeed Taha Mohamed

■ Unappealing — Arngren.net

a. URL	http://www.arngren.net
b. Uses Tables?	Yes — Arngren.net uses HTML tables extensively, but for page layout purposes, which is an outdated practice. The entire page is built with nested tables to position hundreds of product images and text. This causes the content to be disorganized, non-responsive, and impossible to read on mobile.
c. Uses CSS?	Barely — The site uses very little CSS. There is no consistent styling. Fonts, colors, and sizes vary randomly with no visual hierarchy. There are no responsive rules, no hover effects, and no layout system. It looks like a raw 1990s HTML document with no stylesheet.
d. Appealing or Unappealing?	■ Unappealing
	1. Extreme Visual Clutter: The page is an overwhelming collage of hundreds of product images, links, and text crammed together with no spacing or structure. It is impossible to know where to look or how to find anything.
	2. No Responsive Design: The site does not adapt to different screen sizes. On mobile, the user must scroll left and right, which is a very poor user experience by modern standards.
	3. Inconsistent Fonts and Colors: Text appears in different colors, sizes, and fonts with no logic or hierarchy. Some text is nearly unreadable due to poor contrast between the text and background colors.

e. Improvements?	1. Redesign the layout using CSS Grid/Flexbox to create an organized product grid with clear categories. 2. Add CSS media queries to make the site responsive on mobile and tablet. 3. Choose one or two fonts and a limited color palette to create a clean, consistent, and readable visual style.
